Babafemi Adojutelegan

Senior Software Engineer | React Native | React | TypeScript
Columbus, OH | 7736412696 | babafemiadojutelegan@gmail.com | US Permanent Resident | GitHub

SUMMARY

Senior Software Engineer with 8+ years delivering end-to-end React Native and React/Next.js applications across healthcare and enterprise domains. Architected a shared React Native component library adopted by 10+ production apps and 10 engineering teams, and built a RAG document assistant that reduced review time from hours to under 2 minutes per 1,000+ pages. Skilled in TypeScript, state management, offline-first architecture, production observability, testing, and release automation.

TECHNICAL SKILLS

- **Languages**: TypeScript, JavaScript, Python, SQL, Swift
- **Mobile & Frontend**: React Native, Expo, iOS, Android, React, Next.js, Storybook, Redux, React Context, MobX, TanStack Query (React Query), Zustand, React Native Reanimated, React Navigation, Native Modules, Figma, CSS, iOS App Development, Frontend Architecture, State Management, Frontend Performance Optimization, Electron, PCI-Sensitive Payment UIs
- **Backend & Cloud**: Node.js, Express.js, AWS (Lambda, S3, Cognito, API Gateway), Azure, Firebase, Docker, Kubernetes, RESTful APIs
- **Build & Release**: Git, Fastlane, EAS (Expo Application Services), TestFlight, GitHub Actions, Certificate Management, Claude Code
- **Testing**: Jest, React Native Testing Library, Detox, Maestro, Automated Testing, Cypress
- **Data & Security**: PostgreSQL, MongoDB, Azure Cosmos DB, SQLite, AWS Cognito, Microsoft Entra ID, OAuth2
- **Observability**: Datadog, Sentry, CloudWatch, Grafana, Azure Application Insights

WORK EXPERIENCE

Telus Digital (formerly WillowTree) **Oct 2024 - Aug 2026**
Senior Software Engineer

- Built and improved React Native and Electron chat interfaces and a source-validation viewer for a RAG document assistant, applying frontend performance optimization to reduce document review time from hours to under 2 minutes per 1,000+ pages
- Architected a shared React Native component library from Figma designs, applying frontend architecture principles across 10+ production apps and 10 engineering teams to reduce UI duplication and accelerate feature delivery
- Prevented data loss during network disruptions by designing an offline-first React Native architecture with encrypted SQLite, biometric authentication, and centralized state management
- Automated enterprise mobile release pipelines with Azure DevOps and Fastlane, managing iOS certificates and credentials through Azure Key Vault to streamline TestFlight and Microsoft Intune distribution
- Designed Grafana observability dashboards using Azure Application Insights, reducing incident triage time from approximately 2 hours to under 30 minutes

Rhaeos **Jul 2023 - Jun 2024**
Mobile Application Developer

- Engineered a healthcare monitoring platform with strict data-integrity and security controls, delivering patient- and CRA-facing React Native iOS apps that interfaced with medical hardware over BLE, which enabled clinicians to access real-time data securely and reduced data-entry errors
- Secured high-frequency BLE telemetry by implementing Bluetooth LE Secure Connections and building a custom Swift native module that bridges medical hardware with React Native, resulting in encrypted data transmission and compliance with HIPAA security standards
- Architected serverless AWS pipelines using Lambda, Python, S3, and Cognito to ingest real-time medical sensor telemetry and enforce role-based access control, cutting data processing latency and simplifying deployment
- Established automated testing and CI/CD workflows for React Native applications with Jest, Detox, and GitHub Actions, reducing release defects and accelerating delivery of mobile builds

Eminent Technology **Jan 2019 - Jul 2023**
Full Stack Developer

- Delivered mobile and web applications across 7+ enterprise engagements for ExxonMobil, Pool Corp, and Oceaneering, leading technical execution from architecture through production with Node.js, Azure, and SQLite, which resulted in on-time delivery and higher client satisfaction
- Architected and deployed cloud applications with React Native, Node.js, Azure, Firebase, Docker, and Kubernetes across development and production environments, improving system scalability and reducing infrastructure costs
- Engineered a serverless React Native telemedicine platform with Node.js and Firebase, implementing authentication, scheduling, and real-time patient/provider workflows, which enabled clinicians to conduct remote visits and shortened appointment wait times

Independent Software Consultant **May 2018 - Jan 2019**
Mobile App Developer

- Owned the end-to-end delivery of production Android apps for SMB clients, using Android Studio, Firebase, and AWS Lambda; set up CI/CD pipelines with GitHub Actions and conducted testing with Jest, resulting in on-time App Store releases and positive client feedback
- Integrated OAuth2 authentication via AWS Cognito and RESTful APIs with PCI-sensitive payment UIs, employing API Gateway and secure token handling to protect user login and payment flows for client applications

EDUCATION

Accra Institute of Technology **2019**
BSc., Information Technology

CERTIFICATIONS

- AWS Certified Solutions Architect Associate (SAA-C03): Amazon Web Services **2024**
- Microsoft Certified: Azure AI Cloud Developer Associate (AI-200): Microsoft **2026**
